SHOP CONCEPT

Ice Cream Shop design is a creative work that incorporates several different elements of interior decoration, industrial design, graphic design, ergonomics, and advertising.

Shop Concept has become an important aspect for any retail company because it can make a big difference when it comes to efficiency and profits. Because this product will bring connotations like sweetness, summer and childhood into your mind.

Crystal proudly presents its full coverage over turnkey ice cream shop concepts. With only the given dimensions of a store, our experienced team can study your needs, your required ice cream menus and offer the design and equipment accordingly. Our turnkey project options includes:

- Design | Architecture designs and alternatives
- Equip | All manufactured and guaranteed by Crystal
- Install | Ship and install the whole concept
- Operate | Operation of the whole ice cream shop
- Train | Training from our experienced gelato chefs
- Recipes | Most popular recipes from our gelato chefs
- Ingredient | Introduce and link to a variety of choices
- Promote | Assistance in promoting the concept and business

We make sure to deliver the highest technologies and features for our machines. Therefore, our R&D center with over 30 experienced engineers in different fields, constantly improve our technology with their innovative touch.

Double Inverter

Take full control over your gelato preparation by our pro series. Double inverter feature lets you easily control the cooling and beater motor separately. With our pro series, you can pause and continue your gelato preparation whenever you desire.

User Interface

With our easy to use and user-friendly interference, you are able to edit and program your machines to obtain your products in the exact way you desire.

Semi-Hermetic Compressor

Maximize your cooling capacity with the help of semi-hermetic compressors used in Pro and Mec series and also easily take care of the technical service for any maintenance.

Beater

Feel the power and consistency with our one-piece special stainless steel beater design and have the least leftover in the cylinder while using the Pro and Mec series in your gelato preparations.

We offer 24/7 customer service to our clients. For our distributors, we host and train their technical team for an ultimate technical support in the field. All components and spare parts are manufactured with the highest technology and machinery. The production, stock control and the delivery is monitored throughout the whole process via our ERP system.

Demonstration

Our partners and clients are always welcome to visit our factory where we can demonstrate the operation of our machines.

Training

We make sure our partners have enough knowledge of our machines and their operation. That is why we always provide the necessary training for both operational and technical aspects. The training courses are held in our facility or at the clients' premises.

Remote Access

In case our clients' technicians are not able to troubleshoot or detect a problem, our technical team can easily access the machine with the built-in inverter via internet when the devices are connected. By this way, our technical team can precisely guide and help to overcome the potential problems.

Spare Parts

As any other operating machines, the spare parts are the most important point and need to be available on demand. Therefore, we manufacture almost 80% of our spare parts in our production facility and also have stock control on the parts which are supplied from our suppliers. By this means, we can prepare the parts at an economy efficiency rate and ship them to our clients in the shortest time.

Contribution

We make sure our partners are satisfied with our products and service. Therefore, we always visit them where we can discuss the business situation and future plans for a long term partnership.

Pro 5 | Pro 9 | Pro 12 | Pro 16 | Pro 19 | Pro 23 | Pro 27

- Direct expansion horizontal cylinder design
- Double inverter feature to control the cooling and beater separately
- Ability to completely pause and resume the production during the operation
- Special all stainless steel beater design helps to reach to desired overrun with the least leftover in the cylinder after the production
- Secure operation with magnetic hopper safety guard
- User-friendly interface
- Full control over amount of mix added to the cylinder and the compressor’s power for ultimate and desired consistency of ice cream
- Adaptive cooling technology
- Production capacities of 5 KG up to 27 KG per cycle

Today, our machines are successfully operating in 5 continents in over 85 countries. With our high circulation of goods around the world, we make sure to have the least transit time by providing any logistic and freight support to our customers. By our high sense of standards and principals in flexible manufacturing, wide product range, after sales service, technical support, spare parts stock control and on time delivery, we are able to expand our export network every year with the help of our valuable partners and clients.
